Invitation Letter from 2016 KASBP Fall Symposium

Korean American Society in Biotech and Pharmaceuticals (KASBP) cordially invites all members and friends to the 2016 KASBP Fall Symposium with great program in Edison, NJ, from October 21 to October 22, 2016. Following the success of previous symposiums, this symposium continues to focus on current trends and issues in drug discovery and development.

The symposium organization committee is delighted to announce the recruitment of outstanding speakers and panels. Invited speakers will share their experience and expertise with the attendees regarding cutting-edge sciences on medicinal chemistry, gene therapy, PKPD and emerging technology. Also, Dr. Jang-Ho Cha, a distinguished Korean-American scientist and our keynote speaker will be awarded with KASBP-Daewoong Achievement Award based on his contribution to drug discovery and development. He is currently the Global Head of Translational Medicine, Neuroscience at Novartis. Active in the Huntington's Disease community, he has held several leadership positions, such as Chair of the Gordon Research Conference on 'CAG Triplet Repeat Disorders' and chair of the Huntington Study Group HD Clinical Research Symposium. Also, he has been appointed Chairman of the Board of Trustees at the Huntington's Disease Society of America (HDSA) in 2014.

As another meaningful event, the KASBP-Daewoong and KASBP-Green Cross fellowship awards will be presented to young scholars such as graduate students, post-docs and industry scientists who exhibit excellence in their research.

This symposium also provides an opportunity for members to establish professional networks, and share information and experience in the pursuit of excellence in research and development.

This symposium would not be possible without support from a wide variety of sponsors including Daewoong and Green Cross as main sponsors in this event. Committee pays special thanks to them.

The symposium organization committee is looking forward to meeting all members and participants associated with pharmaceutical and biotech industry as well as academics.
